Hi Alan,

Do you have time to touch base this week on the status?

Subject: June 19th EQC Meeting

Attached is the draft agenda and meeting logistics for the June 18-19, 2014 EQC meeting in the Dalles, Oregon.

The session on the Watersheds study (Paired watershed study) and the Water Quality Management Approach for Temperature is scheduled to begin at 1:30 on the 19th but could start as early as 1:00 pm if the executive session ends before 1:30. We should plan to be at the location by 1:00 PM on the 19th.

On the 19th, beginning at 1:30 (or close to that time), the Watershed Research Council will have 45 minutes to present its findings on the paired watershed study. The WRC is going to use the study results to try to convince the EQC that the PCW standard is inappropriate. The WRC will likely give the same presentation at the BOF workshop in an attempt to convince the BOF to petition the EQC for a rule change.

Following the WRC presentation at the EQC meeting, DEQ, ODFW and EPA will give their presentations. DEQ will present and answer questions for the first 30 minutes followed by ODFW and EPA. ODFW and EPA will each have 15 minutes for presentations and Q&As.

We have been communicating with DEQ on what they will cover and what they would like us to cover. We are working on our final talking points right now and will be connecting with DEQ next week to share final presentations. Our understanding is that DEQ's presentation will focus on the value and background of PCW, and, its findings from the paired watershed. Our presentation will focus on the water quality standard but we will be prepared to address questions on the paired watershed study and CZARA, if questions come up for us.

At the present time our line-up includes John Palmer as our presenter on the PCW standard. Peter will

be there to address key forestry questions and paired watershed study questions, and Alan and Jenny will be there to address CZARA questions. Our management representative is to be determined, possibly Dave or Dan.

That's it for right now. Please feel free to touch bases with me or Jenny if you have any questions.

Alan
